

## 8 Reasons to Consider On-Site Occupational and Physical Therapists

If your organization is debating the merits of having occupational and physical therapists on-site, consider these 7 reasons to make an informed decision.

### **Reason #1: The Return-on-Investment**

An analysis of the results you will experience often indicates a strong return-on-investment. At WorkWell, we've found that on-site services provide an average return-on-investment of 3:1 to 5:1.

### **Reason #2: Reducing the Cost of Claims**

On-site services typically reduce the cost of impactable claims. Our results typically show a reduction of 25-50%.

### **Reason #3: Lowering the Number of Claims**

Early intervention screening done immediately after an employee recognizes a soft tissue concern minimizes the likelihood that it will result in an injury claim and OSHA recordable.

### **Reason #4: Less Employee Time Away from Work**

On-site therapies reduce the average employee's time away from work. When therapists are on site, it eliminates the need for an employee to drive to and from an off-site facility for treatment. Our work with clients has reduced the average employee's time away from work by 36% as well as a faster return to work.

### **Reason #5: Building Employee Trust Means Reduced Claims**

Once employees build a relationship and trust with on-site physical therapists and occupational therapists, they are more likely to report a workplace discomfort or injury right after it has occurred. When therapists can address the symptoms with early intervention treatment, this also reduces the total claim cost and number of claims.

Pre-Hire to Retire Prevention, Wellness and Treatment

**Reason #6: The Right Training Makes the Difference**

Workplace injuries require a special expertise. Did you know that fewer than 5% of all U.S. therapists are trained in this area? Therapists trained in occupational health services have a bigger impact (that's why 100% of the WorkWell team is trained in this specialty).

**Reason #7: Small Space Requirements Support the ROI**

On-site clinics require very little floor space (as small as 8' x 8'), which is often easily covered by the ROI projection.

**Reason #8: Being Proactive Matters**

Through proactive on-site training, coaching and education, including strengthening exercises and proper ergonomics, companies can get ahead of soft tissue injuries.

Did you know soft tissue injuries are the majority of workers' compensation claims in the U.S.?
